

源码如下

```
1 <?php
2     setcookie("ahash",base64_encode($secret.urldecode("admin"."admin")),time()+(60*60*24*7));
3     //error_reporting(0);
4     show_source("28.php");
5     echo '<br>';
6     require 'flag.php';
7     if(!isset($_POST["username"]) || !isset($_POST["password"])){
8         exit();
9     }
10    $username = $_POST["username"];
11    $password = $_POST["password"];
12
13    if(!empty($_COOKIE["check"])){
14        if(urldecode($username) === "admin" && urldecode($password) != "admin"){
15            if($_COOKIE["check"] === base64_encode($secret).urldecode($username.$password)){
16                echo "Login successful .\r\n";
17                die("The flag is ".$flag);
18            }
19            else{
20                die("check your cookie again!");
21            }
22        }
23        else{
24            die("Son's of bitch? Are you admin?Fuck you!");
25        }
26    }
27
28 ?>
```

通过阅读源码，我们可以知道我们需要、手动去调整cookie的内容  
payload

```
1 cookie: check=ODg=admin12345
2
3 post数据: username=admin&password=12345
```
