## 源码如下

```
1 <?php
show_source("25.php");
     echo '<br>';
4 error_reporting(0);
5 if (isset($_GET['which']))
      $which = $_GET['which'];
      switch ($which)
9
     {
     case 0:
10
11
     case 1:
     case 2:
12
          require_once $which.'.php';
13
           echo $flag;
14
          break;
15
     default:
16
           echo GWF_HTML::error('PHP-0817', 'Hacker NoNoNo!', false);
17
18
           break;
      }
19
20 }
21 ?>
```

仔细阅读源码,可以发现是写代码的披露,没有对所有项都break 所以就是任意文件包含

payload

```
1 which=flag
```
